What people did:

Alex: Homepage, leaderboards, added activities with Kostas (temperature, solar panels). Minor code refactoring cleanup.

Jean Louis: questionnaire page, validation of the questionnaire, code cleanup. Redesigning the profile page, progress bar.

Kostas: Implementing the functionality of the activities home temperature and installing solar panels, also added to the GUI with Alex.

Omar: Gets points for saving CO_2 as well as completing Achievements. All achievements should have a photo now. Achievements should be updated on the Server as well as Client-side.

Shashank: Request to Server to edit profile. CO_2 saved by every user (statistics requests). Cleaned up the friend requests to not return User.

Evaldas: top friends, statistics system, total CO_2 saved by all users. Also done on front-end.

Vetle: Security Question and forgot password, notification popups.

Issues anyone had this week:

Evaldas: Implemented a feature too late in the week, cause some issues with the demo.

Alex: Intermediate deadlines,

Evaldas: Update the level ASAP in the profile page.

Omar: Anti-cheat system to not level up too fast

Alex: We have that indirectly, because the CO_2 will decrease to 0 eventually so levelling up too much is not possible.
